

Scanning into SharePoint

If you need to put paper documents into SharePoint, you need GoScan. Although SharePoint is great at storing vital company information, it lacks a way to scan documents. GoScan drives paper to SharePoint, through any image capture device.

Indexing into SharePoint

GoScan offers automatic indexing of documents using barcode or OCR recognition. GoScan can recognize barcoded sheets within a large stack of documents and then separate the documents into smaller files. GoScan can also OCR a document and create a searchable PDF or other file. Barcoding or OCR provide fast, accurate filing of documents without any human intervention.

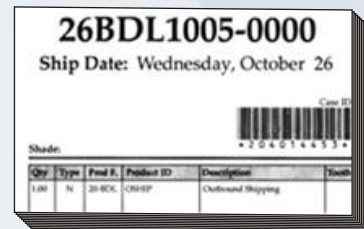

Tight SharePoint integration

- Fast HTTP connection for scanning inside your firewall
- Secure SharePoint web service connection for scanning outside your firewall
- Uses the SharePoint object and security model

Cost Effective

- SharePoint integration is provided at no cost with GoScan Workgroup and GoScan Enterprise.
- GoScan is royalty free (no per page or other ongoing costs)

1 - Gather documents

2 - GoScan with any scanner

3 - View in SharePoint

GoScan, Inc.
